Mafalda Veloso CUSTOMER JOURNEY

Mafalda opens the bank website to **simulate a loan**, giving details about what she wants, such as loan duration and amount.	**Authentication via facial recognition** is required to complete the loan application.	There is some error with the facial recognition and Mafalda can't continue with the loan application.	Mafalda decides to call the bank's customer support line, so that the problem can be solved.	The bank's representative in client support informs a software engineer and he quickly solves the problem.	Mafalda can now **authenticate herself via facial recognition** and continue with the loan application.	Mafalda gives the rest of the **required information** to the bank, like the average of her last three earnings and expenses.	The information is sent to a system that will decide wether to approve or reject Mafalda's loan request or to schedule an interview.	**Mafalda is notified**, via SMS or email, depending on her preference, that the decision regarding her loan is available in the application.	Mafalda opens the application, logs in via **facial recognition**, and verifies that her **loan has been accepted.**	Mafalda is thrilled that her loan has been accepted.	Mafalda **fills out a questionary** provided by the bank regarding her experience with her loan process.	Mafalda gets to buy cars to fill her dealership and start her business as soon as possible.
